

## How Can Your Business Benefit From The Alltek Services Cloud?

Whether you need to host a key business application or your entire business operation, our cloud environment is a secure, scalable and cost-effective solution. Hosted in a category 5 hurricane-rated building with redundant internet coming in from four different geographic quadrants, Alltek Services' Cloud is the perfect solution for growing businesses in Central Florida.

### Why Should You Use Our Cloud Service?

- 1. To prevent outages:** As you know, Polk County can often be affected by power outages. If you use a server on-premise, your business will be out of commission.
- 2. You won't have to purchase new servers every 5-6 years.** We ensure our cloud is supported by the latest technology. You'll have access to this without the upfront costs. And you won't worry that your investment will soon be obsolete.
- 3. No more worries.** You won't have to stay up-to-date on cloud processes and changes. As you know, so much is moving to the Cloud. We handle everything to provide the 24/7 access you require. And, you'll have the proactive IT support needed to manage your cloud infrastructure.

### Cloud Infrastructure Benefits:

- Rapid migration and deployment of your operations.
- A Hyper-Converged environment creates drive, processor, and memory redundancy to eliminate downtime.
- Utilize enterprise-level hardware without requiring you to purchase your own.
- You'll be seconds away from Alltek's core operations, allowing our senior engineers to make upgrades, conduct maintenance and respond immediately without the need for an onsite visit.

### Data Center Benefits:

- Four internet providers who were chosen for their quality and data tracks. This ensures that high-speed internet is always available to access your data.
- Elevated 20 stories above sea level.
- Hardened category 5 hurricane-rated building. Our data center is a building within a building shell.
- Seismic zone 0, and located outside of the floodplain.

### How To Take Advantage Of Our Cloud Services

There are three options you can choose:

- 1. No server required:** You can use Microsoft Office 365 to authenticate and use SharePoint for cloud file sharing. This is a good option for small offices that may not want the extra expense of a cloud server.
- 2. Purchase a server and host in our cabinet in the data center:** There are pros and cons to this solution. This is a good option to lower your monthly costs. The size and bandwidth of the server dictate the monthly cost of hosting in the data center. While it does lower your monthly cost, it would be very expensive to purchase the level of sophistication we have in our hyper-converged infrastructure.
- 3. Host your entire business infrastructure on our hyper-converged cloud infrastructure.** (This is the best-case scenario.) This ensures redundancy and uptime of the server. Paired with the data center benefits, downtime is virtually eliminated. Going with option 3 allows even small businesses to utilize the redundancy and power of our infrastructure without incurring a large cost.
